Issue

Replication snapshot not being deleted, even after the retention period has passed - defined on @max_distretention parameter

Investigation/Analysis

No errors observed on snapshot agent.

PG confirmed the existence of a code defect.

Mitigation

Until fix deployment, the customer can delete manually the snapshot and folder, when no longer needed.

Command for file deletion:

```
az storage file delete-batch --source </path/to/file> --account-key <account_key> --account-name <MyAccount>
```

Command to delete the specified empty directory:

```
az storage directory delete --name <my_directory_for_deletion> --share-name <my_share_name> --account-key <acc
```
